

Database Migration: Likes and Comments Feature

Overview

This migration adds like and comment functionality to community posts (exercise submissions).

New Models Added

SubmissionLike

Tracks likes on exercise submissions:

- `id` : Unique identifier (cuid)
- `userId` : Reference to User who liked
- `submissionId` : Reference to ExerciseSubmission
- `createdAt` : Timestamp when like was created
- **Unique constraint:** [`userId`, `submissionId`] - prevents duplicate likes

SubmissionComment

Tracks comments on exercise submissions:

- `id` : Unique identifier (cuid)
- `content` : Comment text (Text field)
- `userId` : Reference to User who commented
- `submissionId` : Reference to ExerciseSubmission
- `createdAt` : Timestamp when comment was created
- `updatedAt` : Timestamp when comment was last updated

PostLike

Tracks likes on community posts:

- `id` : Unique identifier (cuid)
- `userId` : Reference to User who liked
- `postId` : Reference to CommunityPost
- `createdAt` : Timestamp when like was created
- **Unique constraint:** [`userId`, `postId`] - prevents duplicate likes

PostComment

Tracks comments on community posts:

- `id` : Unique identifier (cuid)
- `content` : Comment text (Text field)
- `userId` : Reference to User who commented
- `postId` : Reference to CommunityPost
- `createdAt` : Timestamp when comment was created
- `updatedAt` : Timestamp when comment was last updated

Updated Models

User

Added new relations:

- `postLikes : PostLike[]`
- `postComments : PostComment[]`
- `submissionLikes : SubmissionLike[]`
- `submissionComments : SubmissionComment[]`

ExerciseSubmission

Added new relations:

- `likes : SubmissionLike[]`
- `comments : SubmissionComment[]`

CommunityPost

Added new relations:

- `likes : PostLike[]`
- `comments : PostComment[]`

Migration Commands

To apply this migration to your database:

```
# Navigate to the app directory
cd app

# Generate Prisma client with new models
npx prisma generate

# Create and apply migration
npx prisma migrate dev --name add_likes_and_comments

# Or if database is already in sync
npx prisma db push
```

Rollback Instructions

If you need to rollback this migration:

1. Remove the SubmissionLike, SubmissionComment, PostLike, and PostComment models from `schema.prisma`
2. Remove the relations from User, ExerciseSubmission, and CommunityPost models
3. Run: `npx prisma migrate dev --name rollback_likes_and_comments`

Notes

- The unique constraints on likes prevent users from liking the same post multiple times
- Comments support editing (tracked via `updatedAt`)
- All foreign keys use `onDelete: Cascade` to maintain referential integrity
- Users can only edit/delete their own comments (enforced in API layer)
